

## SPORTS CENTRE – LE MANS – FRANCE

In 1994 the steel construction (consisting of tubes) under the roof of **the Centre of Sports and Culture in Le Mans** was protected with **ZINGA** as unique system. In total 2 tons of **ZINGA** were used for this application. The work was done by the contractor **LASSARAT** and was completed on 15-12-1994. During an inspection by the company Ri Allan Sidaner in November 2003, **9 years after application of ZINGA**, the tubes were found to be in perfect condition and did not show any trace of rust, even though there is always a very high degree of condensation present under the roof.
