

BANGOR PIER – IMMERSSED PILES – IRELAND

ZINGA was applied on immersed piles of a pier in the Bangor harbour. The piles were first UHP water-blasted and then grit-blasted to give the correct surface profile. Then approx. 200 µm of **ZINGA** was applied in 4 coats by brush. The work was executed by the contracting company **SAR Marine and General** in November 2000.

System:
Zinga

4 x 50 µm DFT
