

TRANSFORMERS – KEPCO – SOUTH KOREA

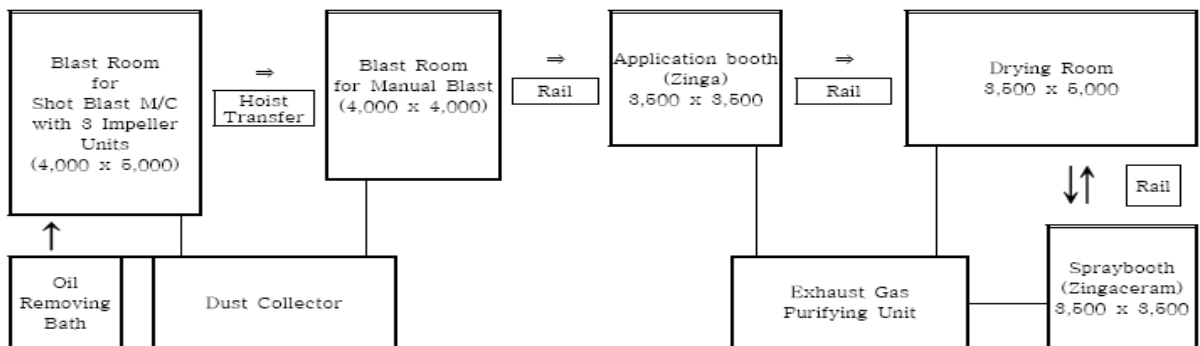

After rigorous comparative testing in 2007, **KEPCO (Korea Electric Power Corporation)** transformers decided to use a **ZINGA** system to protect thousands of transformers against corrosion.

These transformers will be placed next to the sea shore and thus will be exposed to aggressive conditions.

In order to work as efficient as possible, an automatic blasting-spraying and drying line was assembled under supervision by the **ZINGA SOUTH-KOREA** Distributor.
