

TRANSMISSIEMASTEN – FORMOSA PLASTICS CY – TAIWAN

In 1999 werd **ZINGA** toegepast door het bedrijf **UNITED FUEL TREATMENT** bovenop de oude en verweerde thermisch verzinkte lagen op de transmissietorens van het bedrijf **FORMOSA PLASTICS** in Taiwan. Zie hun aanbeveling hieronder.

Dear sirs,

We hereby would like to confirm that we had used ZINGA on transmission towers with great satisfaction.

We used ZINGA on the 150 feet-high transmission towers which is located on the tidal site really being a very aggressive environment. We were only able to apply 2 layers ZINGA by brush on jobsite one year ago. Its unique anticorrision property could be compared to hot-dip galvanization. The customers said that it can not be pealed off even hited by a hammer and till now no maintenance has been necessary. We have full confidence in the protection of the Zinga which is expected to have a span of 10 years life. They also said that they have never seen such a good paint-likeing system before. Therefore, they placed the second order with us this month.

Best regards,

Ren' De', Chu
President

UNITED FUEL TREATMENT CORP. UNITED FUEL TREATMENT CORP. UNITED FUEL TREATMENT CORP.

System:
Nieuw thermisch verzinkt (geroest)
ZINGA 2 x 60 µm DFD

Deze foto's tonen de 345 KV zendmasten van **FORMOSA PLASTICS COMPANY**, voor en tijdens de applicatie op locatie. De torens staan in Mai-Liau in een zeer agressieve omgeving (getijdenland). Er wordt verteld dat HDG in dit gebied een beschermingsduur heeft van slechts +/- 12 maanden.
