

## RAIL TRACKS – ROYAL THAI NAVY – THAILAND

At the end of 2010, **ZINGA** was applied on the rail tracks that serve to pull the **Royal Thai Navy** ships from the river (at Phra Chulachomklao) on the shore so that these ships can be repaired.

These tracks at the **Navy Dockyard** were protected against heavy corrosion (caused by the location of the tracks in the splashzone) with a **ZINGA** unique system.

System:  
 Surface preparation :  
 Blasting to SA 2.5  
 and Rz 50-70  $\mu\text{m}$   
 ZINGA 2 x 60  $\mu\text{m}$  DFT
