

## LIGHT POLES – KATOEN NATIE TERMINAL CUENCA DEL PLATA – PORT OF MONTEVIDEO – URUGUAY

**KATOEN NATIE**, a Belgian multinational company, is one of the main logistical and port operators in the world.

Since 2001, the grantee for the operation of the specialized container terminal is in the Port of Montevideo, Terminal Cuenca del Plata, which operates in partnership with the **Uruguayan National Ports Authority**.

The 45m high lighting poles, originally hot dip galvanized, began to show signs of corrosion after more than 20 years of service.

In 2011, **KATOEN NATIE** initiated the maintenance of several lighting poles at the terminal, after successful tests carried out with **ZINGA** in 2010 on selected poles.

**ZINGA** was applied manually by brush on a total of 19 lighting poles. Per lighting pole, 60 Kg of **ZINGA** was used.

System:  
Surface preparation: HP Washing  
**ZINGA**      2 x 60 µm DFT

**7 years after this ZINGA** application, a visual inspection was made in October 2018 and the light poles were still in perfect condition.
