

DOME – TROPICAL ISLAND – BERLIN – GERMANY

The former “Cargolifter” (Zeppelin hangar) in Berlin-Krausnick has been converted to a tropical island resort.

System:
ZINGA 2 x 60 µm DFT

Technical problem :

The new parts of the dome-shaped roofing membrane had to be protected against corrosion
Due to the enormous humidity under the dome.

ZINGA was chosen for its anti-corrosion performance in very humid environments.

A layer of 120 µm was applied.

Assembly of the parts:

Each screw and bolt was again treated with **ZINGA** after installation.

This avoids the risk of corrosion caused by condensation water.
