VECTOR
INTERNATIONAL

TO WHOM IT MAY CONCERN

Vector International have been using Zinga for almost a year, and it has performed very satisfactory, in the North Sea's harshest environments, replacing hot dip galvanised on our clamps and bolting.

The platforms which these items have been used are on all in the northernmost part of the North Sea, and subjected to extreme conditions, (seawater, weather) as well as abrasion and rough handling.

The Oil Companies who have specified Zinga, are Mobil (North Sea), B.P., Britannia Operator Limited.

The platforms in which these are used are the Britannia, Beryl A.B, Skene, all BP Platforms.

The Zinga has given very satisfactory service, with the added advantage of being abrasively superior, and also being able to be re-coated in situ.

Best Regards,

Jim Fraser
Branch Manager
Vector International Ltd
