

POTABLE WATER RESERVOIR – SAO PAULO – BRAZIL

In 2013, a potable water reservoir tower located near beach houses in Sao Paulo, was protected with **ZINGA**.

The water reservoirs were badly corroded. After dismantling of the towers, they were treated in a work shop. The surface was cleaned and blasted before a first application of **ZINGA**.

The external **ZINGA** layer was overcoated with a UV resistant PU, the inside was overcoated with an epoxy suitable for contact with potable water.
