

TV TOWER – CHONGQING BROADCASTING – CHINA

In July 2001 the **CHONGQING BROADCASTING** Company has constructed a new TV transmission tower.

ZINGA was applied on top of hot-dip galvanised steel. The hot-dip galvanising layer was new but due to its bad quality, it had already started to rust. It was roughened by means of a chemical etching product.

The site was inspected in April 2002 and the **ZINGA** was found to be in excellent condition.

System:

Hot-dip 1 x 90 μm

ZINGA 1 x 40 to 50 μm DFT
